V. CAC Process and Function

- A. Motion to resume meeting in person tabled to future meeting.
- B. Interesting news item: At Crystal Lake in Robbinsdale they are using existing settling tanks (a flocculation plant) to treat lake water. Flocculation chemicals are added to the water, which binds the phosphorus and algae into clumps which then settle out. This improves water clarity and will reduce the formation of toxic blue-green algae in the lake. Settled pollutants are discharged to the sewer system.
